For instance in Q. 2, if the top row has the numbers 1, 3, 5 and 2 in place, then the empty boxes would be 4 and 6 but you'll need more clues to figure out which number goes in each box. - Use clues from the columns to place the correct numbers. Look at the column cutting into the empty box you are focusing on. If one of the number options is already in that column, it eliminates that number, because if written in, it would be repeated.
